- Patients Seen Daily: 60
- Workstations: 35

MaximEyes has helped our practice become more efficient and productive as the software allows for easy archiving of tests and access to electronic medical charts no matter where you are located.

With the built-in e-prescribing tool, we can submit regulatory compliant e-prescriptions to pharmacies and prevent interactions and errors by transferring patient information from a MaximEyes exam record directly into the e-prescribing site. The new estimated co-pay function is a welcome addition.

The 3D drawing tool is far superior to other products I've seen on the market. It translates measurements from the drawing into written findings on the exam to further enhance patient documentation details.

Our office is currently gearing up to attest for the Medicare EHR incentive program by demonstrating meaningful use. With the help of MaximEyes, which is a certified EHR, the software will assist by allowing us to audit our performance and capture the required information from our patients.

Harinderjit Singh, MD, FRCS

Southeast Retina Center, Augusta, GA

- Doctors/Staff: 2 full-time doctors and 25 staff
- Patients Seen Daily: 50-60
- Workstations: 25

MaximEyes is a very user-friendly EHR software. It is professionally made with input from practicing ophthalmologists and can be tailored to different subspecialties in ophthalmology. As a retina specialist, I find the drawing tool to be very beneficial. While I am new to using EHR, since our practice recently made the leap from paper to electronic, I find that EHR is becoming a lot easier with time. We hope that in several months our practice will become totally paperless.

There is always a learning curve to making any change in practice management; however, transitioning to MaximEyes EHR was a lot easier than other conversions I've done in the past.

“The 3D drawing tool is far superior to other products I’ve seen on the market.”
